

Is there a Mobile Phone tower going up on your street? Has 5G Infrastructure been installed in your child's school? Here is what you can do about it.

Collect Emitter Details from RFNSA.com.au

Search for existing or proposed mobile telecommunication tower locations RFNSA.com.au. Determine the proximity to your home, work and/or school; the type of technology (5G, 4G, small cell); the emission levels and community consultation periods. Identify the Telco, the installer, local council and the landowner.

List Down Any Symptoms or Side Effects

Obtain a report from your GP. Ascertain whether or not the EMR emissions or proposed emissions are or could pose a risk of harm to your health. If risk of harm to health is advised, then request that the medical practitioner advise on recommendations as to what needs to be done to remedy the situation. Contact SEEN for assistance with this process.

Send an Objection letter To Council

Send your objective notice to each councillor and/or aldermen within the Council. Build a relationship, try to meet with them to explain your situation

Rally Your Neighbours

Get your neighbours involved. Develop petitions, assist others in writing in objection letters and educate the community at large of their right to say no to being irradiated at home, work or school. Consider hosting a community meeting. SEEN can assist with this process.

Measure EMR Emissions

Contact a building biologist to conduct a report as to the level of EMR emissions in your home, workplace and/or school. Take photos of the installation before and afterwards for evidence. It would be useful to document the radiation emission levels before and after new installations and/or upgrades to 5G. Consider buying an EMF Meter of your own.

Send an Objection Letter to the Telco

Make your objections known to the Telco. In the objection notice state that you do not consent to be irradiated with their EMR emissions and that you have a reasonable belief and/or fear that emissions pose a risk of harm to health or damage to your property. This risk can be supported by a doctor's letter. Send by registered mail.

Compile Evidence

Keep original copies of ALL notices or letters received from Telco and local council. Compile all relevant documentation, including the emission reports on the RFNSA website and the emission reports provided by you, or your building biologist.

Send Letter to Editor of Local Media / Newspaper

Ensure your voice is heard and empower others to speak up. Be sure to cite scientific literature and discuss our right to object to radiation emitting infrastructure. For assistance, contact SEEN.

Follow The Broomhall 22 Step Plan

MAN MADE NON IONIZING ELECTROMAGNETIC RADIATION STEPS TO PREPARE EVIDENCE FOR LITIGATION and POTENTIAL REMEDIES © Raymond J Broomhall is a legal strategy developed by Barrister Raymond Broomhall to help individuals prepare for litigation. Please refer to SEENs "Legal Preparation Checklist", a data collection tool based on Broomhall's 22-step legal strategy and contact SEEN for more information.

Get Legal Advice

Advice should include your legal position, legal options, legal remedies, chance of success and pitfalls etc.

The advice may include opinion as to remedy concerning laws that apply the precautionary principle. The precautionary principle is an integral component in State or Federal policy and is usually found embedded in the majority of State and Federal legislation. The precautionary principle as a rule should be actioned when an activity raises threats of harm to human health or the environment, precautionary measures should be taken even if some cause-and-effect relationships are not fully established scientifically.

Health risks associated with EMR though not fully established scientifically at present would still require precautionary measures to be taken by emitter and governmental decision makers.
